ROCKHOLD 50% ACTIVE 50% PASSIVE CAUTIOUS

INVESTMENT OBJECTIVES

Our objective is to outperform UK RPI over the medium to long term, keeping within the prescribed volatility limits whilst predominantly investing in a combination of actively managed funds and low cost Index funds, physically invested and with a low tracking error. To achieve the Investment Objectives we deploy quantitative and qualitative techniques and extensive research that shape our macro economic views and select active funds where they can add value. In addition, we maintain a constant exposure to our own multi-asset managed funds, which adds further diversification and risk control. Where we don't believe a suitable active fund is available, we retain the flexibility to use passive funds.

MANAGER'S COMMENTARY

The geopolitical risk emanating from the Russia-Ukraine conflict continued to affect the markets in June, with the wider impact of the conflict continuing to be felt across energy and agricultural commodity prices and into inflation numbers. After a prolonged period "behind the curve" the Federal Reserve and other central banks have woken up to the issues presented by strong inflationary pressure. Interest rates have been raised twice in US and similarly around the world to control rising prices. Excess liquidity will be removed using quantitative tightening, a relatively new technique and whose side-effects for markets is not fully understood. Simultaneously economies, led by the United States, are naturally slowing and so the ability to create an economic "soft landing" will be tough indeed. The pathway to avoid a recession is narrowing. With inflation rates elevated and at 40 plus year highs throughout G7 and beyond, markets are now primarily responding to the central banks response and monetary policy risks and with an increasing probability of a recession in the next 12-18 months being factored in. As markets anticipate a possible recession, an earnings slowdown will be factored in and could impact valuations as results are announced. Consumer behavior will be important from here. For us, the S&P 500 index level of around 3200-3300 would be a clear re-entry point and a strong buying envelope, provided there is no new exogenous risk. With the current PE ratio hovering around 19-times earnings today, these levels point to a more modest PE of around 14 times. Significant falls in value have been recorded with even US treasuries down 10%. The culprit is of course inflation and the knock-on anticipation of rising interest rates which has dragged yields higher and capital values lower. Higher yielding corporate bonds have suffered more so as their default risk has risen. The benchmark 10-year treasury hit 3.49% yield, very close to our target level of 3.5%. However, glimmers of hope are now appearing – longer dated treasury yields have begun to fall along with some early indications that inflation may have peaked. Commodity prices for many industrial metals including the leading indicator copper have begun to fall back. We raised cash in portfolios across the board most recently and had previously reduced duration in fixed income allocations which has certainly helped buffer portfolios against market gyrations so far along with the unhedged US dollar exposure which has performed heroically. We are now favouring changes to duration and cash and intend to take some further equity exposure off into any sign of strength. All portfolios remained inside their allocated risk corridors during the month.
